

# CENTURI ONBOARD

Centuri OnBoard is a mobile application designed for board members, which gives them access to updated documentation relating to board work.

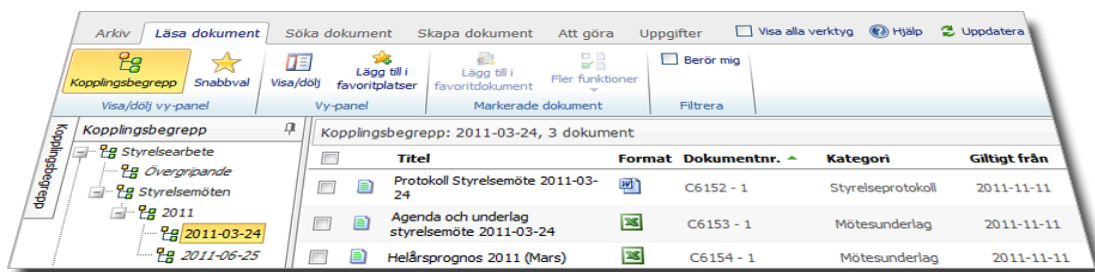

## Mobility

In recent years, we have seen huge progress in the use of mobile devices. For many people, the phone has taken over as the most important tool after the PC. Faster mobile connectivity, high-resolution screens and increased user-friendliness have meant that many tasks can now be handled on a mobile phone. Centuri version 8 provides the functionality of using apps to read documents on iPads/iPhones or Android devices.

## OnBoard

Board work is normally associated with occasions when important decisions are made on the basis of the latest information about the operations of an organisation or company. This also means that board members are expected to be up-to-date on the issues to be discussed in order for the meeting to be effective.

The traditional way is to distribute the supporting documentation on paper, by mail or as email attachments, a number of days before the meeting. Frequently, last minute changes are made and the previously distributed material suddenly becomes outdated. With Centuri OnBoard, there are a number of benefits:

- All the material relating to board activities is available online.
- No need for printing agendas, minutes, etc.
- All board members can use their laptops, iPads or Android devices to read the documents before, during and after the meeting.
- The latest updates of reports, analyses, etc., are always available
- Time-saving. Our first customer has reduced the preparation time required before each board meeting, from one day to 15 minutes.

OnBoard is run as an encrypted cloud-based service, which means that board documentation can be made available to all the relevant people, and no one else.
