

TECHNICAL INFORMATION

CENTURI 8

Technical information Centuri 8

Centuri is a configurable standard system for document-, non-conformities and contract management.

The product lives up to the toughest demands such as SWEDAC, FDA, BRC requirements and standards like ISO 9000, ISO 14000 and ISO 22000. This is also reflected in our customer base where a large majority has a certified or accredited management system.

Security

Security is important for us. The documents must be securely stored, it should not be possible to read documents that you are not authorized to access and it should not be possible to overwrite data by mistake. Furthermore, reading-logs must be updated with the right information. Meanwhile, the security shall not be an obstacle. It must be easy to use Centuri despite high security.

For us, a part of the solution was to let Centuri rest on Microsoft SQL Server. The database takes care of, and secures the login procedure and the documents are stored in a so-called document vault in the database. For the possible need to restore a backup, this is a great advantage.

Web server

Please note that this does not have to be your main web server.

- Internet Information Server (IIS) 6, 7 or 8.
- .NET Framework 3.5

Please contact us if you are using a later version of IIS.

Database server

It is not necessary to place Centuri on a dedicated server. It can co-exist with other database applications.

- Microsoft SQL Server 2014
- Microsoft SQL Server 2012
- Microsoft SQL Server 2008

Please contact us if you are using an older or newer version.

Database connections on the client side

- MDAC 2.8 SP1 or later. (only applies to clients that use the Windows application)

Please contact us if you are using an older or newer version.

Operating systems

Supported server operating systems are:
Microsoft Windows Server 2003, 2008 or 2012.

Supported client operating systems are:
Microsoft Windows XP, Vista, Windows 7, Windows 8 or Windows 10.

Please contact us if you are using older or newer versions.

Technical information Centuri 8

Microsoft Office versions

For integration to Microsoft Office, the following versions are valid:

- Office 2007, 2010, 2013 or 2016.

Please contact us if you are using an older or newer version.

NET Framework on the client

- .NET Framework 2.0 (only applies to clients that use the Windows application)

Web reader

- Internet Explorer 8, 9, 10 or 11.

To create documents requires an installation of an ActiveX component.

Hardware requirements

- Database server: we refer to Microsoft's hardware requirements for SQL server, which also depends on operating system.

E-mail

- E-mail is being sent by the SMTP-protocol. Verify that SMTP is working by sending a test message by Telnet. E-mails are sent using a service so the test should be performed on the production server.

Reports

- Reports are written in Crystal Reports (only applies to clients using the Windows-application).

Please contact Centuri if you have other applications using Crystal Reports. This is to ensure that no compatibility problems between different versions of Crystal Reports will occur.
